. 3 -

- With the exception of wire and cables, raw material is obtained on the domestic market. This includes copper, bronze, iron and bakelite. At all times, the factory warehouses are stocked with three or four carloads of bronze, and two carloads of copper, in order to avoid a shortage of the most vital raw materials. Iron ore is employed only when there is a lack of scrap iron. This occurs frequently, since the process of salvaging scrap iron is not always satisfactory. Domestic wire and cables produced in Croatia are employed only when imported wire and cables are unavailable. Alloys and compounds used in production are prepared in the factory laboratories.
- The machinery installations of the Svjetlost factory were purchased in the lat-7. ter part of 1945 and early 1946. The machinery in the workshop was imported from Germany, while the machinery in the electrical workshop was imported from Whereas most of the machinery of the factory is new, the lathe 50X1-HUM equipment in the machine section is old.
- The factory employes approximately 850 workers and 140 employees, who work in two shifts. The administrative personnel of the factory is listed as follows:

a. Manager:

b. Secretary:

Technical Manager:

d. Chief of Electric Power:

Chief of Planning:

e. Chief of Planning: f. Personnel Manager:

g. Chief Engineer:

h. Assistant Engineer:

Velja Ratkovic, Communist Party member; Miodrag Jovanovic, Communist Party member;

Janko Radojevic, engineer;

Jovan Nedec. Communist Party member;

A certain Milicevic;

Mira Jerkovic, Communist Party member;

A certain Ponestain, a German contract employee; and

Heinrich Gern, a former prisoner of war.
